1. Executive Summary

Rating: At Risk

SolvAI's comprehensive analysis indicates that this EU/UK freelancer's financial standing is currently rated as 'At Risk', with an overall score of 35 out of 100. While the business demonstrates a strong growth trajectory and a respectable average monthly revenue, significant income variability and high client concentration pose considerable risks that warrant careful attention. Over the 13-month analysis period, the freelancer has maintained a solid average monthly revenue of 6,317.74 EUR. A key strength identified is the robust growth trend, with recent revenues showing an impressive increase of approximately 49% compared to earlier periods. This indicates a healthy and expanding business operation over the analyzed timeframe. Furthermore, the revenue data reveals a discernible seasonal pattern, with specific high-performing months (e.g., September, November, December 2025, March, May 2026) and corresponding low-performing months (e.g., June, July, August, October 2025, January, February, April, June 2026). This pattern, while indicating fluctuations, also suggests a degree of predictability in income cycles, which can be strategically managed with proactive financial planning. However, income stability remains a significant concern. Monthly revenues have fluctuated substantially, ranging from a low of 2,410.51 EUR in June 2025 to a peak of 16,095.69 EUR in May 2026. This high degree of month-to-month variability makes future income less predictable and could impact cash flow management. A more critical factor contributing to the 'At Risk' rating is the substantial client concentration. The top client alone accounts for 23.0% of the total revenue, and the top three clients collectively contribute a significant 59.2% of the revenue. With only 8 distinct clients identified, this high reliance on a limited number of clients presents a considerable vulnerability. The loss or reduction of work from even one or two major clients could severely impact the freelancer's financial health and operational capacity. All financial data for this report was exclusively sourced from a single platform, STRIPE, which provides a focused but potentially limited view of the freelancer's overall financial ecosystem. No external reputation signals were available for inclusion in this assessment. To improve overall solvency and mitigate identified risks, the freelancer should prioritize diversifying their client base to reduce concentration risk and explore strategies to smooth out monthly income variability, such as retainer agreements or project staggering.

2. Component Analysis

The overall solvency score is derived from the following key dimensions:

Income Stability

50 / 100

The freelancer demonstrates moderate income stability with an average monthly revenue of 6,317.74 EUR over 13 months. However, monthly revenues show significant fluctuations, ranging from a low of 2,410.51 EUR to a high of 16,095.69 EUR, indicating notable variability in earnings.

Growth Trend

90 / 100

A strong positive growth trend is observed, with recent revenues approximately 49% higher than earlier periods. This indicates a healthy expansion of the freelancer's business over the analyzed 13 months.

Seasonality

65 / 100

The revenue data exhibits a discernible seasonal pattern, with specific high-performing months (e.g., September, November, December 2025, March, May 2026) and low-performing months (e.g., June, July, August, October 2025, January, February, April, June 2026). This suggests predictable fluctuations in demand or project cycles.

Client Concentration

40 / 100

There is a significant level of client concentration. The top client accounts for 23.0% of total revenue, and the top three clients collectively contribute 59.2% of the revenue. With only 8 distinct clients, this high reliance on a few clients presents a notable risk to income stability should any major client relationships change.

Reputation Signals

0 / 100

No reputation signals or external reviews were available for analysis in the provided financial summary.

3. Financial Data & Evidence

Analysis is based on aggregated financial data from 1 verified platforms (STRIPE), spanning **13 months**.

Average Monthly Revenue

€ 6,317.74

Monthly Revenue Series

Month	Transactions	Total Revenue (EUR)
2025-06	1	€ 2,410.51
2025-07	3	€ 3,503.11
2025-08	1	€ 2,874.28
2025-09	5	€ 8,588.21
2025-10	3	€ 3,485.28
